## Overview of this manual

#### About this manual

This manual contains instructions for:

- mechanical and electrical installation of the IRT 710
- · maintenance of the IRT 710
- mechanical and electrical repair of the IRT 710

The robot described in this manual has the following protection types:

Standard

#### Product manual scope

The manual covers all variants and designs of the IRT 710. Some variants and designs may have been removed from the business offer and are no longer available for purchase.

#### Usage

This manual should be used during:

- installation and commissioning, from lifting the product to its work site and securing it to the foundation, to making it ready for operation
- · maintenance work
- · repair work
- · decommissioning work

#### Note

It is the responsibility of the integrator to conduct a risk assessment of the final application.

It is the responsibility of the integrator to provide safety and user guides for the robot system.

#### Who should read this manual?

This manual is intended for:

- · installation personnel
- · maintenance personnel
- · repair personnel.

#### **Prerequisites**

A maintenance/repair/installation craftsman working with an ABB robot must:

- be trained by ABB and have the required knowledge of mechanical and electrical installation/repair/maintenance work.
- be trained to respond to emergencies or abnormal situations.

## **Product documentation**

#### Categories for user documentation from ABB Robotics

The user documentation from ABB Robotics is divided into a number of categories. This listing is based on the type of information in the documents, regardless of whether the products are standard or optional.

Tip

All documents can be found via myABB Business Portal, www.abb.com/myABB.

#### **Product manuals**

Manipulators, controllers, DressPack/SpotPack, and most other hardware is delivered with a **Product manual** that generally contains:

- · Safety information.
- Installation and commissioning (descriptions of mechanical installation or electrical connections).
- Maintenance (descriptions of all required preventive maintenance procedures including intervals and expected life time of parts).
- Repair (descriptions of all recommended repair procedures including spare parts).
- · Calibration.
- · Troubleshooting.
- · Decommissioning.
- Reference information (safety standards, unit conversions, screw joints, lists of tools).
- Spare parts list with corresponding figures (or references to separate spare parts lists).
- References to circuit diagrams.

#### **Technical reference manuals**

The technical reference manuals describe reference information for robotics products, for example lubrication, the RAPID language, and system parameters.

#### **Application manuals**

Specific applications (for example software or hardware options) are described in **Application manuals**. An application manual can describe one or several applications.

An application manual generally contains information about:

- The purpose of the application (what it does and when it is useful).
- What is included (for example cables, I/O boards, RAPID instructions, system parameters, software).
- How to install included or required hardware.
- · How to use the application.

Continues on next page

#### **Product documentation**

Continued

• Examples of how to use the application.

#### **Operating manuals**

The operating manuals describe hands-on handling of the products. The manuals are aimed at those having first-hand operational contact with the product, that is production cell operators, programmers, and troubleshooters.

## 1 Spare parts and exploded views

#### Spare part level

ABB spare parts are categorized into two levels, L1 and L2. Always check the part level before conducting a service work on a spare part.

· L1 spare parts

The L1 parts can be replaced in the field. The maintenance and replacement instructions given in the related product manuals must be strictly followed. If there are any problems, contact your local ABB for support.

· L2 spare parts

To replace the L2 parts require specialized training and might need special tools. Only ABB field service personnel or qualified personnel trained by ABB can replace L2 parts.

#### Cable lengths

Flexible cables are mounted in the cable chain of the track motion. The tables show the cable lengths required for different connections with different travel lengths. The cables are divided into following tables:

- IRB Power cables: handles power supply to the motors of the robot.
- IRT Power cables: handles power supply to the motor of the track motion.
- IRB/IRT Signal cables: handles feedback from the serial measurement board.
- Position switch cables: handles supply to and feedback from position switches, if any.
- Customer cables: handles communication with equipment fitted on robot.
